

Are you a farmer or an aspiring grower looking for training and networking opportunities in sustainable agriculture?

Growing Growers *Kansas City*

The *Growing Growers* program provides education to new and experienced growers through a farm apprenticeship program and annual workshop series. *Growing Growers* is a collaborative effort of regional agricultural colleges, local farmers and non-profit organizations. We work to increase the production of local food by helping new and existing producers grow their businesses. **All workshops and partner events are open to the public and free of charge for active program apprentices.**
